That is to say, while the reality of African politics appears not to fit into the framework of political science theory, at the same time, political science has actively ignored the experience of African politics (an example of this is researchers who take a pessimistic view of Africa based on the "absence" of Western-style democratization and civil society).

Goran Hyden discusses how research on African politics relates to the study of politics in other regions and mainstream theories in comparative politics. He focuses on such key issues as why politics trumps economics, rule is personal, state is weak and policies are made with a communal rather than an individual lens. The book also discusses why in the light of these conditions agriculture is problematic, gender contested, ethnicity manipulated and relations with Western powers a matter of defiance.

'Darryl Glaser supplies an illuminating overview of the scholarship since 1970 on South Africa's political history. His emphasis is on the debates between liberals, Marxists, and to a lesser extent "post-structuralists" about the origins and the course of South Africa's racial order' - Tom Lodge, University of Witwatersrand 'A well-researched, well-argued, readable, interesting, informative and competent study' - Capital and Class Providing a wide-ranging and critical introduction to contemporary South Africa, this book uses an interdisciplinary lens to introduce the student to the main debates, historical context, and issues that have characterized the study of South Africa over the last three decades. Key topics include: the role of colonialism, capitalism and modernity in the formation of the racial order; changes in the South African state; questions of class, race and ethnicity; black resistance; and the transition to democracy. A number of underlying debates are critically evaluated. For example, the contribution of materialist and class-analytic approaches, the application of post-structuralism and theories of modernity, and the prospects for democratic liberalism and socialism in post-apartheid South Africa.

Africa is a continent of 54 countries and over a billion people. However, despite the rich diversity of the African experience, it is striking that continuations and themes seem to be reflected across the continent, particularly south of the Sahara. Questions of underdevelopment, outside exploitation, and misrule are characteristic of many - if not most-states in Sub-Saharan Africa. In this Very Short Introduction Ian Taylor explores how politics is practiced on the African continent, considering the nature of the state in Sub-Saharan Africa and why its state structures are generally weaker than elsewhere in the world. Exploring the historical and contemporary factors which account for Africa's underdevelopment, he also analyses why some African countries suffer from high levels of political violence while others are spared. Unveiling the ways in which African state and society actually function beyond the formal institutional façade, Taylor discusses how external factors - both inherited and contemporary - act upon the continent. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

China's rise to global power status in recent decades has been accompanied by deepening economic relationships with Africa, with the New Silk Road's extension to Sub-Saharan Africa as the latest step, leading to much academic debate about the influence of Chinese business in the continent. However, China's engagement with African states at the political and diplomatic level has received less attention in the literature. This book investigates the impact of Chinese policies on African politics, asking how China deals with political instability in Africa and in turn how Africans perceive China to be helping or hindering political stability. While China officially operates with a foreign policy strategy which conceives of Africa as one integrated monolithic area (with the Forum on China-Africa Cooperation (FOCAC) the flagship of inter-continental cooperation), this book highlights the plurality of context-specific interaction patterns between China and African elites, demonstrating how China's role and relevance has differently evolved according to whether African countries are resource-rich and geostrategically important from the Chinese perspective or not. By looking comparatively at a range of different country cases, the book aims to promote a more thorough understanding of how China reacts to political stability and instability, and in which ways the country contributes to domestic political dynamics and stability within African states. China's New Role in African Politics will be of interest to researchers from across Political Science, International Relations, International Law and Economy, Security Studies, and African and Chinese Studies.

Secessionism perseveres as a complex political phenomenon in Africa, yet often a more in-depth analysis is overshadowed by the aspirational simplicity of pursuing a new state. Using historical and contemporary approaches, this edited volume offers the most exhaustive collection of empirical studies of African secessionism to date. The respected expert contributors put salient and lesser known cases into comparative perspective, covering Biafra, Katanga, Eritrea and South Sudan alongside Barotseland, Cabinda, and the Comoros, among others. Suggesting that African secessionism can be understood through the categories of aspiration, grievance, performance, and disenchantment, the book's analytical framework promises to be a building block for future studies of the topic.
