Unicorn Colors. Out of the largest 50 unicorns, tech startups that have achieved valuations of \$1 billion or more, the most common primary branding color was black or grey. A total of 38% of companies, including stalwarts like Uber, Visa, and WeWork, rely on these hues for their outward appearance. Blue is well-known as a strong business color, and it is no surprise that 20% of the top 50 unicorns focus on blue as their primary branding color.

One of the most influential elements of a business 's brand when creating graphics, that range from a logo to a brochure, is colour. Yet whilst mulling over their options many businesses can overlook the fascinating influence that colour psychology may have on their choice. The psychological effects of colour are all around us – from red being used within road signs as warnings, to yellow being the colour used within Easter cards and right onto the greens that appear to point us to safety

The Psychology of Colour in Business - CF24.7 blog

Color Theory Explained for Marketers and Small Business Owners. When designers make choices about color, their decisions are informed by science. And where hard data is not available, consensus becomes the foremost guide. Collective wisdom also dictates which color combinations seem to harmonize or clash unpleasantly.

Color Theory for Marketers & Small Business Owners ...

All well and good but how is this relevant to business? According to Forbes customers make a purchasing decision within 90 seconds and between 62 and 90% of that judgement is based on the colour of the product. Now, that 's a pretty wide margin but assuming we attribute the lowest figure ie 62%, that is still indicating that over half the ...
