Continuous Delivery shows how to create fully
automated, repeatable, and reliable processes
for rapidly moving changes through build,
deploy, test, and release. Using these
techniques, software organizations are
getting critical fixes and other new releases
into production in hours -- sometimes even
minutes -- even in large projects with complex
code bases.

Martin Fowler of ThoughtWorks defines Continuous Delivery as “A software development discipline where you build software in such a way that the software can be released to production at any time.” Based on this, here are some obvious conclusions:

Continuous delivery is a software engineering approach in which teams produce software in short cycles, ensuring that the software can be reliably released at any time and, when releasing the software, doing so manually. It aims at building, testing, and releasing software with greater speed and frequency. The approach helps reduce the cost, time, and risk of delivering changes by allowing for more incremental updates to applications in production. A straightforward and repeatable deployment pro

The primary goal of continuous delivery is to make software deployments painless, low-risk events that can be performed at any time, on demand. By applying patterns such as blue-green deployments it is relatively straightforward to achieve zero-downtime deployments that are undetectable to users. Faster time to market.
