point of this project is right in the header: For private, SEO-hidden, CAPTCHA-friendly unselectable text.

## **Colorful Typographic Experiments | CSS-Tricks**

The CSS font-weight property declares how thick or thin should be the characters of a text. Numerical values can be used with this property to set the thickness of the text. The numeric scale range of this property is from 100 to 900 and accepts only multiples of 100. The default value is normal while the default numerical value is 400.

## **Typography | Codecademy**

This is the original article: The font-display descriptor in @font-face blocks is really great. It goes a long way, all by itself, for improving the perceived performance of web font loading. Loading web fonts is tricky stuff and having a tool like this that works as well as it does is a big deal for the web.

## **Google Fonts and font-display | CSS-Tricks**

To use this font on your website, use the following CSS: font-family:

```
{ {familyCtrl.selectedVariation.family.css_font_stack.replace('"', ' ').replace("'", ' ')} } ; font-style: italic normal ; font-weight: { {familyCtrl.selectedVariation.font.web.weight} } ;
```
