Add varying amounts of a chemical to a beaker of water to create a solution, observe that the chemical dissolves in the water at first, and then measure the concentration of the solution at the saturation point. Either potassium nitrate or sodium chloride can be added to the water, and the temperature of the water can be adjusted.

The Discovering Science through Inquiry series provides teachers and students of grades 3-8 with direction for hands-on science exploration around particular science topics and focuses. The series follows the 5E model (engage, explore, explain, elaborate, evaluate). The Matter kit provides a complete inquiry model for the exploration of the structure and properties of matter through supported investigation. Encourage students through activities such as studying the chemical properties of matter and investigating whether household items are acids and bases. Matter kit includes: 16 Inquiry Cards in print and digital formats; Teacher's Guide; Inquiry Handbook (Each kit includes a single copy; additional copies can be ordered); Digital resources include PDFs of activities and additional teacher resources, including images and assessment tools; leveled background pages for students; and video clips to support both students and teachers.

Properties of Matter from Hands-On Science: An Inquiry Approach completely aligns with BC 's New Curriculum for science. Grounded in the Know-Do-Understand model, First Peoples knowledge and perspectives, and student-driven scientific inquiry, this custom-written resource: emphasizes Core Competencies, so students engage in deeper and lifelong learning develops Curricular Competencies as students explore science through hands-on activities fosters a deep understanding of the Big Ideas in science Using proven Hands-On features, Properties of Matter contains information and materials for both teachers and students including: Curricular Competencies correlation charts; background information on the science topics; complete, easy-to-follow lesson plans; reproducible student materials; and materials lists. Innovative new elements have been developed specifically for the new curriculum: a multi-age approach a five-part instructional process—Engage, Explore, Expand, Embed, Enhance an emphasis on technology, sustainability, and personalized learning a fully developed assessment plan for summative, formative, and student self-assessment a focus on real-life Applied Design, Skills, and Technologies learning centres that focus on multiple intelligences and universal design for learning (UDL) place-based learning activities,

This print companion to MindTap General Chemistry: Atoms First presents the narrative, figures, tables and example problems—but no graded problems or assessments. Students must use MindTap to complete the interactive activities, exercises, and assignments. The atoms first organization introduces students to atoms and molecules earlier and delays math-intensive problem-solving to later in the semester. This gives students a stronger conceptual framework to help them succeed in the course. In addition, the narrative provides greater emphasis on the historical development of the atomic nature of matter and atomic structure. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The eleventh edition was carefully reviewed with an eye toward strengthening the content available in OWLv2, end-of-chapter questions, and updating the presentation. Nomenclature changes and the adoption of IUPAC periodic table conventions are highlights of the narrative revisions, along with changes to the discussion of d orbitals. In-text examples have been reformatted to facilitate learning, and the accompanying Interactive Examples in OWLv2 have been redesigned to better parallel the problem-solving approach in the narrative. New Capstone Problems have been added to a number of chapters. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Matthew Johll ' s Exploring Chemistry covers the standard topics for the nonmajors course in the typical order, but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real-life situations. For example, students work through the often-difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed Investigating Chemistry (now in its Third Edition) but Exploring Chemistry goes beyond the other book's specific focus on examples from forensic science to use real-life stories from cooking, athletics, genetics, green chemistry, and more.

Project Earth Science: Physical Oceanography, Revised 2nd Edition, immerses students in activities that focus on water, the substance that covers nearly three-quarters of Earth's surface. Eighteen ready-to-use, teacher-tested classroom activities and supplemental readings offer explorations and straightforward explanations to foster intuitive understanding of key science concepts. Students cover topics such as the structure of water molecules, saltwater and freshwater mixing, and tidal forces as they create waves, dissolve substances, float eggs, and more.
