The fact that ν is a signed measure is explained in the ?rst paragraph on page 86, and follows from the fact that at least one of $\int f^+ d\mu$ and $\int f^- d\mu$ are ?nite (indeed, both are ?nite since $f \in L^1(\mu)$).

Applications."

Folland Chapter 3 Exercise 19

Folland Chapter 3 Exercise 1
Real Analysis Chapter 8
Solutions Jonathan Conder 1
 $m(B_r(x))m(B_s(y)) \leq \frac{1}{2} m(B_{2r}(x))m(B_{2s}(y))$
 $r(x) \leq 2r$
Therefore $(A_n)_{n=1}^{\infty}$ is uniformly Cauchy, so it converges uniformly to a function g which is uniformly continuous (by a standard argument).
