The Occupational Therapy Intervention Process Model is a model that guides therapists to use top-down, client-centered, and occupational-based approaches to assessment and intervention. In this model, assessment begins with an initial referral or a chart review. Therapists then meet and have an interview with clients in order to build the client-centered performance context and to gather relevant information and identify the clients' goals.

Model of Occupational Empowerment The model of occupational empowerment explicates how living in a disempowering environment can lead to a person's maladaptive habits and unhealthy living.

[Model of Occupational Empowerment | OT Theory](#)

The occupational therapy process considers occupation in multiple ways, namely occupation as means and occupation as ends (McLaughlin 1998). Occupation and the construction of a healthy occupational life is arguably the overall aim - the end - of many occupational therapy processes.

[Occupational therapy and complexity: defining and ...](#)

The occupational therapy process can be divided into the evaluation, intervention, and outcome (Figure 12-1). The evaluation process includes referral, screening, developing an occupational profile, and analyzing occupational performance. The intervention process includes intervention planning, implementation, and review.
